

Echo Park Lake Rehabilitation Project
Odor Reporting and Follow-Up Procedure
Odor Monitoring Committee

Thank you for volunteering to be part of the Echo Park Lake Rehabilitation Project Odor Monitoring Committee (OMC)! The project team appreciates your willingness to work with us during this important water quality improvement project.

This rehabilitation project's Environmental Impact Report requires the formation of your OMC as a mitigation measure for potential odors from the lake draining. If you observe any unusual odors in the Echo Park Lake area that you think may be due to the lake draining, please follow the following procedure:

- Step 1: Call the project hotline: (213) 978-0317. You will be directed to an alternate number after regular business hours.
- Step 2: Provide your name, address, and phone number. This information is necessary to help us monitor odor trends and frequency, as well as to follow up with you on our findings and action.
- Step 3: Describe the odor with as much detail as you can.
- Does it smell like algae?
 - Does it smell like truck exhaust?
 - Does it smell like a stagnant pond?
 - Does it smell like fish?
 - Is it acrid, sour, pungent, or decaying?
- Step 4: Wait for an update from our team. We will call you back as soon as we can!
- Step 5: After you hear back from us, share the information with your neighbors!
